1. News & history

February 2012	Re-Certification of quality-management system according to DIN EN ISO 9001:2008. The certificate is valid till 14th February 2013.
January 2012	A further injection molding machine Arburg 520 C extends our possibilities regarding try-out of molds and production of injection parts.
October 2011	A further eroding machine Zimmer+Kreim 850, yb 1999, extends our capacities regarding eroding.
February 2010	A further injection moulding machine expands our machines park. The Ferromatic-Milacron VL 1350-6600 offers a max. clamping force of 1350 t and a bar diameter of max. 1580 x 1320 mm. So we are able to make try outs for moulds and to produce plastic parts from clamping force of 75 t to 1350 t.
January 2010	Re-Certification of quality-management system according to DIN EN ISO 9001:2008. The certificate is valid till 14th February 2013.
July 2009	Also our HERMLE C600U was arranged with our pallet clamping system. Here we can make more electrodes in much more quality.
March 2009	We have finalized the design and production of our pallet clamping system for the milling machine HERMLE C800U. Now we are able to work on several parts in 5 Axis at the same time.
February 2009	The second HERMLE C40 U runs. Also in 5-axis-simultaneous-drilling.
December 2008	The new IBERIMEX-ZAYER-high performance-portal milling machine KPCU-6000-AR with x-axis: 6000 mm, y-axis: 3550 and z-axis: 1100 mm runs.
June 2008	5-axis-simultaneous-drilling are practicable. Many ones talk over it - we do it.
April 2008	A further eroding machine type Zimmer & Kreim 1200, year of manufacturing 1998, extended our machines park.
January 2008	A new injection moulding machine DEMAG 250 to compact with 50er cylinder is put in operation.
October 2007	A new 3-stage WIG-welding device extends our possibilities at the repair- and moulding service department.
June 2007	The new milling machine HERMLE C40 U runs.
June 2006	HWF GmbH arises of Johann Dutiné OHG.
1956	Foundation of „previous-company“ Johann Dutiné OHG.

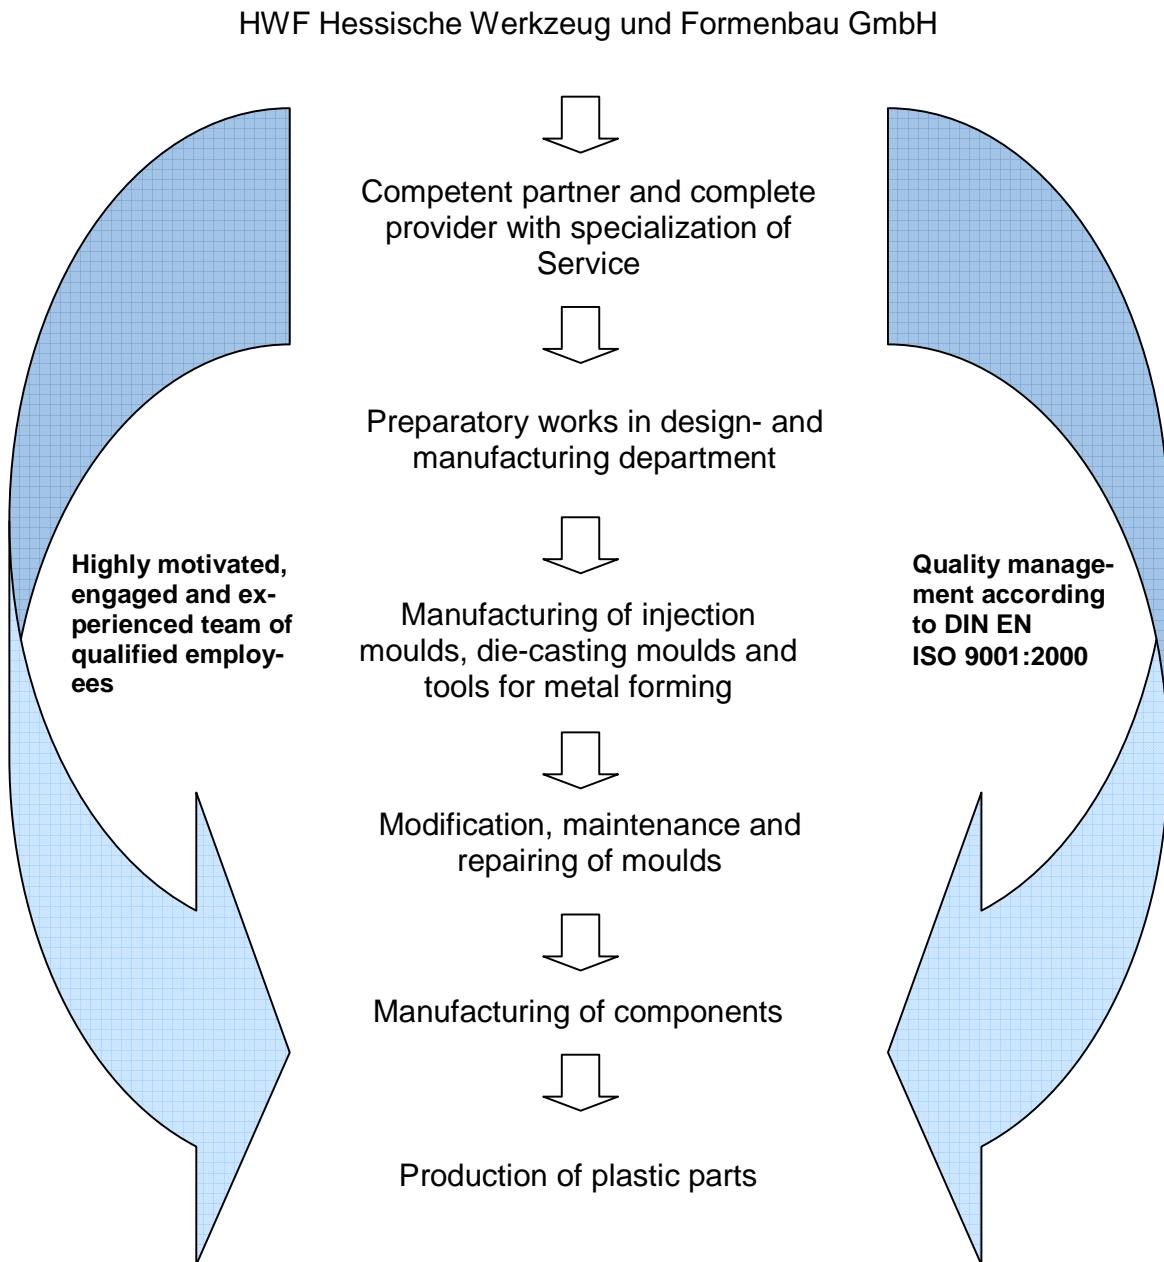

HWF Hessische Werkzeug- und Formenbau GmbH

3. Performance overview

HWF Hessische Werkzeug- und Formenbau GmbH

3.1 Preparatory works in design- and manufacturing department

Design and manufacturing preparation is the link between the customer and the manufacturing.

The evolution, planning and processing of production data for the producing departments occurs here. This contains the mould design, the 2D- and 3D-construction, the CAM programming and the determination of the check criteria.

We have a team from qualified and experienced engineers and technicians.

3.2 Manufacturing of injection moulds, die-casting moulds and tools for metal forming

The design and manufacturing of series injection moulds for the most different automobile and none automobile applications is the core competence of HWF. Since the foundation of the “previous-company” Johann Dutiné in 1956, this has been component of the product range.

33 developed mould makers and 6 moulds maker masters are in our team of 53 employees in total. Compartiment competence and know-how in all fields of the process means that for you.

We specialized on the following products in the mould making:

- Injection moulds
 - till max. total weight of 15 t,
 - in Prototype- and Series design,
 - in 1- and 2-component-technology,
- Die casting moulds
 - till max. total weight of 15 t,
- Tools for metal forming and pressing
 - till max. total weight of 20 t,
 - till max. dimension of 6000 x 2800 x 1200 mm (L x W x H),
- Die sinking- und wire eroding works, Surface grinding- and cylindrical grinding, Lathing, Fitting, Laser welding, Milling of small and big parts.

HWF Hessische Werkzeug- und Formenbau GmbH

3.3 Modification, maintenance and repairing of moulds

- Rapid Service-Task-Force,
- Laser welding,
- Ultrasonic cleaning,
- Weight of moulds till 12 t.,
- Try-outs on site.
- All processes are synchronized flexibly with the requirements of the customer.
- Our most supreme commandment: We hold what we promise!

3.4 Manufacturing of components

The emphasis lies in 3D-outline processing.

We construct and process components (also in HSC- and 5- axis processing):

- for metal forming tools-, die casting- and injection moulds for automobile industry in prototype- and series-design.
- for machinery- and plant-engineering,
- for cubing-models,
- for measuring- and testing-gauge.

In the mean time we have extended our machines park with 2 further machining centre HERMLE C40U. We realize true 5-axes-simultaneous drilling.

Therefore we are able to reduce the processing time and to enlarge the surface quality.

Our milling machines HERMLE C600U and C800U are each equipped with our own designed pallet clamping system. So we can make more electrodes in higher quality and we are able to work on several parts in 5 axis at the same time.

In December 2008 we have extended our machinery with a new IBERIMEX-ZAYER-high performance-portal milling machine KPCU-6000-AR with x-axis: 6000 mm, y-axis: 3550 and z-axis: 1100 mm. This machine offers special highlights:

- Process ways of up to 6000 x 2800 x 1100 mm (XYZ-axis).
- 4 automatically changeable cutter heads.

HWF Hessische Werkzeug- und Formenbau GmbH

Please kindly take the manufacturing possibilities from the datasheet mechanical equipment - see page 13.

HWF Hessische Werkzeug- und Formenbau GmbH

3.5 Production of plastic parts

In order to make the moulds ready for series production, we have several injection moulding machines.

Chiefly we make:

- Try-outs of prototype- and series-injection-moulds,
- Pre-production,
- Limited-lot-production,
- Assembling of components,
- Special feature: production in transparent optics (500 t).

Please kindly take the manufacturing possibilities from the Datasheet mechanical equipment - see page 13.

Also use this service outside of current moulding-projects.

5. Quality management

We secure our claim on quality through the qualification, further education and experience of our employees and by our quality management system that corresponds to the requirements of the DIN in EN ISO 9001:2008. The certificate is valid until 14th February 2013.
